## AUDIO STREAMING UNIT

- Configurable to 2 (A/D) $\times 2$ matrix, 4 (A/D) inputs or 4 outputs (1V)
- Networkable and extendable through MCU1XXXXE
- Input / output volume can be adjusted

(CC) $C \in C B$
- Support both rack mount installation or wall mount installation

## Product Description

## High Quality Audio Streaming

A1 is a module shall be used with MCU1 XXXXE. It can receive network audio from MCU and to be determined with independent tasks, grouping, open / close or volume adjustment. Configuration can be set through the server and status can be monitored remotely. It is built-in with audio codec to also stream external audio source to other endpoints in the network.

## Product Specification

External Audio Sources Amplifiers

With A1-C module converter, the A1 module can be flush mount on the wall and networked / powered by A1C. In decentralized configuration, it enables a single A1 to be functional.

## Flexible Configuration

A1 provides total 4 I/O which is fully configurable according to actual user case. It can be set either as 2 X 2 matrix mode or 4 pure inputs mode or 4 pure outputs mode. By setting different configuration, system architecture can be further optimize which can reduce the total ownership cost.
