PDG-EM-AIO

Modbus Gateway.
For third-party systems, information integration interface for FAS systems,RJ45

Description

It communicates with other system(BMS) through the Modbus protocol and supports a variety of interfaces.

Feature:

- Adopt the international mainstream famous brand MUC (Arm Cortex-A7 Core)
- Stable and high-speed intelligent communication protocol.
- With a variety of LED status indicators.
- Plug-in slot installation, simple and convenient.
- Supports online firmware upgrade.
- Interface communication status monitoring.
- Supports 100Mbps bandwidth.
- The BMS interface adopts the international standard Modbus protocol (TCP).
- Supports BMS communication interface time calibration.
