

CPU2-3300

PTW2-3300 CPU unit.

Description:

As the CPU unit of the PTW2-3300, it is used to centrally manages LCM2-3300, HSN2-3300, TPN2-3300, PDG-EM-AIO, PDG-EM-AIO-IX, ACM2-3300-EN, POM2-3300, ACM2-32 and LDM2-64.

Feature:

- Adopt the international mainstream famous brand MUC (Arm Cortex-A7 Core).
- Stable and high-speed intelligent communication protocol.
- It has rich hardware resources.
- Based on embedded real-time operating system development.
- With a variety of LED status indicators.
- Plug-in slot installation, simple and convenient.
- Supports online firmware upgrade.
- Interface communication status monitoring.
- Built-in system clock (support network master clock calibration).
- Support online/offline and remote data update.
- Multiple protection mechanism design, strong anti-interference ability
